Setup

This dashboard renders the Malaysia URL manifest produced by `R/pull_malaysia.R`. Each row is one PDF target. Rows are grouped by `access_status`:

- **auto** — direct PDF URL verified; the deployment pipeline fetches automatically.
- **manual_pending** — human action required. Click the URL, navigate to the PDF, save it to the displayed local path. After re-running `tar_make(country_urls)`, the row flips to `manual_ready`.
- **manual_ready** — file present at `local_path`; pipeline ingests it on the next text-extraction step.
