

# Malaysia Statutory Tax-Change Dataset

**Identified tax shocks (CIT / PIT / consumption) with motivation and exogeneity**

## 1 Purpose

This is the deployment deliverable: the bound, classified dataset of **statutory tax changes** for Malaysia, produced by the per-instrument identification skills (`/identify-cit`, `/identify-pit`, `/identify-vat`) and the `/identify-tax-shocks` orchestrator. Each row is one narratively-announced act × tax type, carrying the identified rate change (Vegh & Vuletin 2015-style), plus a motivation label and an exogenous/endogenous read from the validated C2b codebook.

The dataset is built to be sent to a human expert for validation. Following the project’s narrative-identification discipline, the exogeneity columns are **preliminary inputs requiring adjudication, not findings**: the deliverable keeps both Claude’s narrative read (`exogenous_preliminary`) and C2b’s classification (`c2b_exogenous`) side by side, and Section 5 flags where they differ.

## **2 Statutory tax-change inventory**

### 3 Rate paths

Figure 1: **Statutory rate paths by tax type.** Step path of the headline statutory rate implied by the identified rate-bearing shocks, faceted by tax type. Non-rate shocks (e.g. one-off levies, regime introductions without a standing rate) are omitted from the path.

### 4 Timeline

Figure 2: **Tax-change timeline.** Acts counted per year  $\times$  tax type  $\times$  motivation  $\times$  direction as a diverging stacked bar: hikes grow the bar upward, cuts downward, neutral acts sit at the baseline. Colour = C2b motivation. Faceted by tax type.

### 5 Where the preliminary read and C2b disagree

The cases where Claude's preliminary narrative read and C2b's classification diverge are the priority for expert adjudication — they are the methodologically consequential calls, not noise.

Table 2: **Exogeneity disagreements.** Shocks where the preliminary narrative read and the C2b exogenous/endogenous classification differ. These are the priority cases for expert adjudication.

| Shock                      | Act                                                                                           | Tax                   | Exo.<br>(prelim) | Exo.<br>(C2b) | Moti-<br>vation<br>(C2b)  |
|----------------------------|-----------------------------------------------------------------------------------------------|-----------------------|------------------|---------------|---------------------------|
| MY-CIT-03                  | Corpo-<br>rate in-<br>come<br>tax rate<br>reduc-<br>tion 30%<br>to 28%<br>(Budget<br>1998)    | CIT                   | TRUE             | FALSE         | Coun-<br>tercycli-<br>cal |
