

C2 Input Verification

Validate C1→C2 handoff: classified chunks and motivation-filtered input

Overview

Before building the C2 codebook or running evaluation, this notebook verifies the C1→C2 data handoff. Two targets are checked:

- `c1_classified_chunks`: C1 S2 classifications merged with chunk text and ground truth labels from `aligned_data`
- `c2_input_data`: Filtered to `pred_label == "FISCAL_MEASURE"` and `discusses_motivation == TRUE`

Eight tests check coverage, label completeness, text joins, C1 output fields, filter correctness, post-filter act coverage, class balance, and token distribution.

Part A: `c1_classified_chunks` (Precursor)

Test 1: Act Coverage

Every act in `aligned_data` should appear in `c1_classified_chunks`.

Test 1: PASS

Test 2: Label Completeness

Every row must have non-NA `motivation_category` and `exogenous_flag`.

Test 2: PASS

Test 3: Text Join Completeness

All rows should have non-NA, non-empty `text` after joining from `chunks`.

Test 3: PASS

Test 4: C1 Output Field Completeness

`pred_label` should be non-NA for all rows. Report the distribution of `discusses_motivation`, `discusses_timing`, and `discusses_magnitude`.

Table 1: C1 prediction distribution

Predicted Label	Chunks	Share
FISCAL_MEASURE	606	79.4%
NOT_FISCAL_MEASURE	157	20.6%

Table 2: Extra output field distribution (FISCAL_MEASURE chunks only)

Field	TRUE	FALSE	NA
motivation	509	97	0
timing	544	62	0
magnitude	539	67	0

Test 4: PASS

Part B: `c2_input_data` (Filtered)

Test 5: Filter Correctness

All rows must have `pred_label == "FISCAL_MEASURE"` and `discusses_motivation == TRUE`.

Test 5: PASS

Test 6: Act Coverage Post-Filter

How many aligned acts survive the motivation filter? Acts that lose all chunks cannot be evaluated by C2.

Test 6: PASS

Test 7: Motivation Class Balance

Distribution of `motivation_category` across C2 input chunks, compared to `aligned_data`.

Table 3: Motivation category: acts in c2_input vs aligned_data

Category	Exogenous?	c2_input	aligned_data
Long-run	Exogenous	15	15
Spending-driven	Endogenous	10	10
Deficit-driven	Exogenous	8	8
Countercyclical	Endogenous	6	6

Table 4: Chunk count per motivation category in c2_input

Category	Chunks
Long-run	212
Countercyclical	99
Deficit-driven	99
Spending-driven	99

Test 7: PASS

Test 8: Token Distribution

Per-chunk token distribution. Chunks were constructed to fit within the context window, so all should be well under 200K.

Table 5: Token distribution across C2 input chunks

Statistic	Tokens
min	1,794
p25	6,138
median	7,192
mean	7,880
p75	9,015
max	25,870

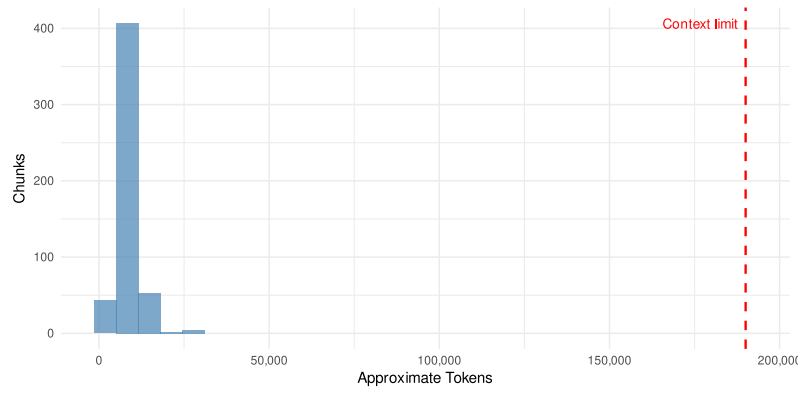

Figure 1: Approximate token count per chunk (C2 input)

Test 8: PASS

Per-Act Summary

Table 6: Per-act chunk summary: classified vs C2 input

Act	Year	Cate- gory	Classi- fied FISCAL MEASURE	C2	In- put
Tax Re- form Act of 1969	1969	Coun- tercycli- cal	27	25	24
Expira- tion of Excess Profits Tax and of Tem- porary Income Tax In- creases	1954	Spend- ing-dri- ven	24	21	20
Rev- enue Act of 1964	1964	Long- run	24	24	20
Rev- enue Act of 1978	1978	Long- run	24	21	20
Tax Ad- just- ment Act of 1966	1966	Long- run	22	20	19
Tax Re- form Act of 1986	1986	Long- run	20	19	19

Summary Dashboard

Table 7: C2 input verification dashboard

Test	Result	Status
T1: Act coverage	39/39 acts present	PASS
T2: Label completeness	motivation: 0 NA, exogenous: 0 NA	PASS
T3: Text join completeness	0 NA, 0 empty (of 763 rows)	PASS
T4: C1 output fields	pred_label: 0 NA; discusses_motivation: 509 TRUE / 97 FALSE / 157 NA	PASS
T5: Filter correctness	Non-FISCAL_MEASURE: 0, discusses_motivation != TRUE: 0	PASS
T6: Act coverage post-filter	39/39 acts retained (0 lost)	PASS
T7: Motivation class balance	4/4 categories match aligned_data	PASS
T8: Token budget fit	Max: 25,870 tokens (limit: 190,000)	PASS

Overall: 8 PASS, 0 WARN, 0 FAIL out of 8 tests.

All clear: C1→C2 handoff validated. Data is ready for C2 code-book development.
